

# SUMMER LEARNING LOSS

The current 9-month school calendar emerged back when 85 percent of Americans were involved in agriculture. Today, only about 3 percent of Americans' livelihoods are tied to the agricultural cycle, and air-conditioning makes it possible for students to have an enjoyable learning experience even in the heat of summer!! There is always mention of a growing concern about the impact of a long summer break on students' abilities. We all learn best when instruction is continuous; a long break causes all of us to have to reset our brains with the "how" and "why" of any task.

Enter Cervelle and our summer programs. Our fun and exciting summer options can help!! We are offering affordable workshops once each week for students to do some hands-on learning and keep their brains engaged with both concepts learned during the school year, and also with new critical thinking and problem solving strategies that will be hugely beneficial as they continue to grow and develop their academic skills.

We also offer a great summer program that is fun and exciting, and not just workbook pages, that develops students' critical thinking and problem solving skills in a really unique and fun way. These skills are useful for people of all ages and not just in a classroom setting. One of the most important things we can do to help our students is to assist them in building their thinking skills.

Please contact us at the office, or by phone or email to discuss how we can help your student be the best they can be. All of our programs are individualized and based on the specific needs and interests of each student. Please feel free to reach out and see how we can help prevent summer learning loss!!

# SUMMER WORKSHOPS

## *June 2*

1:00-2:30 ESCAPE TO SUMMER  
Escape Room Challenge (grades 2 & up)

## *June 9*
